

To Whom It May Concern,

I am writing this letter with concern regarding the twin tunnel initiative. First, I cannot believe this proposal is still on the table. Outrageous. Second, where is the justification to send even more water south? Let's not even get in to the fact that there are farms in the middle of the desert and homes in SO CAL that have luxurious lawns when all landscape should be done up AZ style. We actually see videos here of So Cal citizens washing down their sidewalks in a drought when we are being fined here in Nor Cal for having some run off from our grass going in to the gutter. Plus, we see So Cal reservoirs at 70% full in the winter while Nor Cal lakes are sitting at 15%. Now, let's get in to the damage the tunnels will do to the delta. Salinity levels will decimate the Delta/bay. I know that striper, bass, blue gill, carp and catfish are not so called "native", but they have been here for over a 130 years! At what point is a species considered native? These fish will be destroyed if the tunnels go in. Not to mention the revenue that goes along with it. Third, can we please address the illegal immigration and water consumption they use. An estimated 2.8 million illegal aliens reside in CA. The average person uses 100 gallons of water per day. Or a family of 4 uses 400 gallons per day. This is straight off the EPA website by the way.

www.epa.gov/watersense/pubs/indoor.html. So let's do the math. That is 280 billion gallons of water being used by illegal aliens in this state. MAYBE, get a handle on this problem first? Gov. Brown is all for these tunnels for one reason only. Money! Please, do not let these tunnels be built. The delta/bay will basically die and this is fact! Thank you, Don Pearson
